

AN: PAT 1999-446773
TI: Software updater-component for updating computer software
via network
PN: **GB2333864-A**
PD: 04.08.1999
AB: NOVELTY - The software updater-component identifies and
initiates access to locations on the network where required
software updates may be located, and, when an update is due,
retrieves and applies the update-software to the program
concerned.; USE - For updating computer software via computer
network. ADVANTAGE - Software is upgraded without the
requirement of any action on the part of the user. Also saves
the vendor the expense of shipping CD's or the like with
software updates.
